

Hybrid Storage Model

Alok Deshpande

October 30, 2017

1 Introduction

This model describes the energy flows in a two- storage system. It will be formulated as a dynamic programming problem.

2 Model

2.1 Constraints

- Supply demand balance:
- Stored energy changes, including constant leakage loss:
- Bounds on stored energy:
- Bounds on charging:
- Bounds on discharging:

2.2 Objective Function

- Minimize charge and discharge rates for the first storage device (battery)
- Minimize power loss due to energy transfers
